## **DETAILED ACTION**

Page 2

1. Claim 15 objected to because of the following informalities: In Claim 15, "chosen PWM duty cycle values is <u>one below 50 percent and of said chosen PWM duty cycle values is above 50 percent</u>". Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 16-19 rejected under 35 U.S.C. 102(e) as being anticipated by Williams et al (6445155).

Regarding Claims 16. Williams discloses a method of operating a brushless motor which includes (a) means for applying startup PWM signals or voltage to move the motor (Figure 1 item 46), (b) a current sensor (Figure 2 item 40) for measuring the current of the motor, (c) calculating the apparent resistance of the motor (Figure 1 item 46; column 2 lines 10-67, column 3 lines 1-67, column 7 lines 20-67, column 8 lines 1-35 and column 12 lines 8-32). The steps are repeated in insure precise motor drive control.

Regarding Claims 17. Williams show in Figures 4 and 5 the duty cycle comprise of four periods, which are of equal time. The voltage or duty cycle is applied with both positive and negative polarity.

Application/Control Number: 09/930,793

Art Unit: 2837

Regarding Claims 18 and 19. Williams shows in Figure 2 items 40-46, 1) applying a PWM signal or DC voltage to move the motor, 2) taking measurements of the current in the motor and 3) modifying the calculated apparent resistance. Refer to column 44-56.

4. Claims 1-15 allowed.

## Examiner's Response

5. Applicant's arguments filed July 7, 2003 have been fully considered but they are not persuasive.

Examiner rejection of claims 16-19 is based on the claims as presented, Williams discloses a method of operating a brushless motor which includes (a) means for applying startup PWM signals or voltage to move the motor (b) a current sensor for measuring the current of the motor, (c) calculating the apparent resistance of the motor as detailed in the rejection above. Williams show in Figures 4 and 5 the duty cycle comprise of four periods, which are of equal time. The voltage or duty cycle is applied with both positive and negative polarity. Williams discloses 1) applying a PWM signal or DC voltage to move the motor, 2) taking measurements of the current in the motor and 3) modifying the calculated apparent resistance. Examiner suggests amending the claims for apt prosecution of the case.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

Application/Control Number: 09/930,793

Art Unit: 2837

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing date

of this final action.

7. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Tyrone W Smith whose telephone number is 703-306-5987. The

examiner can normally be reached on weekdays from 8:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Robert Nappi, can be reached on (703) 308-3370. The fax phone number for the

organization where this application or proceeding is assigned is (703) 872-9306

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-308-1782.
